Kun amme upotetaan rakenteeseen, jokainen asennus on tapauskohtainen.

Rakenteiden suunnittelussa suosittelemme kääntymään asiantuntevan urakoitsijan puoleen. Rakenteisiin upotettavissa ammeissa huoltoluukku on välttämätön lattiakaivon, putkien ja tiivisteiden tarkastusta, siivousta ja huoltoa varten.

Rakenteet on hyvä viimeistellä vasta, kun upotukseen tarkoitettu amme on asennuspaikalla mittojen lopullista tarkastamista varten. Ammeen jalat on hyvä säätää siten, että suurin rasituspaino tulee jalustalle rakenteisiin nähden.

Hyvin ja säännöllisesti hoidettu amme lisää kylpynautintoa ja ammeen käyttöikää.

Puhdista amme säännöllisesti miedoilla pesuaineilla ja pehmeällä rätillä. Hankaavat ja hiovat aineet naarmuttaa ammeen pintaa ja himmentävät pinnan kiiltoa. Kiiltävä pinta on helpompi pitää puhtaana. Himmenneen akryylipinnan saa ennalleen autovahalla.

Om badkaret skall installeras som ett inbyggt kar, vänligen uppmärksamma att varje installation är individuell. Vid planering av inbyggnad rekommenderar vi att man vänder sig till en yrkesman för att försäkra sig om bästa resultat. Vid inbyggd installation är en servicelucka nödvändig för att man ska kunna underhålla, städa, besiktiga rör, golvbrunn och tätningar. Vi rekommenderar att konstruktionen byggs när man har karet på plats för att kunna säkerställa alla mått. Fötter bör justeras så att den största belastningen kommer på fotställningen.

Du kan njuta av ditt badkar under lång tid om du sköter det väl. Rengör badkaret regelbundet med milda rengöringsmedel och mjuk trasa. Medel med slipande effekt kan repa akrylkytan och göra den matt. En blank yta är också lättare att rengöra och sköta. Om akrylkytan har förlorat något av sin glans, kan du få den att glänsa igen genom att använda bilvax.

NO Seven D

Dersom badekaret skal bygges inn, vær oppmerksom på at hvert kar har individuell montering. Ved planlegging av innbyggingskar anbefaler vi at man tar kontakt med en håndverker for å forsikre seg om best mulig resultat. Det er nødvendig med en service-/inspeksjonsluke for kar som skal bygges inn. Dette for at man lettere skal kunne ren-gjøre, reparere, sjekke rør, sluk og tetninger. Vi anbefaler at konstruksjonen bygges når man har karet på plass for å kunne sikkerhetsstille alle mål. Føtter bør justeres slik at den største belastningen blir på fotstillingen.

Du kan nyte ditt badekar i lang tid dersom du holder det ved like. Rengjør badekaret regelmessig med milde rengjøringsmidler og myk klut. Middel med slipe-effekt kan ripe akryloverflaten og gjøre den matt. En blank overflate er også lettere å holde ved like og renholde. Dersom akryloverflaten har mistet noe av sin glans, kan du få den til å skinne igjen ved å bruke Spapolish eller bilvoks.

GB Seven D

If the tub is to be installed as a built-in bathtub, please note that each installation is individual. When planning the installation, we recommend that you turn to a professional to ensure the best results. For built-in installation is a service hatch needed to be able to maintain, clean, inspect pipes, floor drain and seals. We recommend that the design is built when you have the tub in place to ensure all measurements. Feet should be adjusted so that the largest stress will be on the foot position.

You can enjoy your bath for a long time if you manage it well. Clean the bath regularly with mild detergent and soft cloth. Abrasive effect can scratch the acrylic surface and do it math. A smooth surface is also easier to clean and maintain. If the surface has lost in luster, you can get it to shine again by using spa polish or car wax.
